

Vinayak Mahtani Tuesday 16:14

To confirm the following is pending

- 1- The flow. Invoice Form once vendor is registered then to finance approval- once finance approves to invoice tracker and then to HOD approval once HOD approves then to QuickBooks and Excel- when excel updates then to invoice tracker and once paid then from invoice tracker to QuickBooks
- 2- Data from the Vendor Registration should go the invoice tracker automatically
- 3- Currency conversion needs to be automated
- 4- Views in the invoice tracker need to be sorted and with permissions

lets aim to have this completed by tomorrow morning so we can do a final full test run

Tuesday 17:17

1. Discussion -

Vendor registration form is marked complete once all the mandatory fields are filled. Then an entry is made into invoice tracker by validating against IBAN or Vendor Code inside the INVOICE pdf.

Issue-

if these values are not found, NO entry can be made in invoice tracker. So, it's recommended to create an entry without waiting for Vendor form to complete because there is no linkage between Vendor form and Invoice tracker fields until some common ground like IBAN or Vendor Code is found inside the INVOICE pdf.

Now, the issue is "when to send an invoice creation email because how would an invoice know which vendor it came from since the vendor is not created yet".

please confirm

Edited

2. It is possible when finance choses a vendor from the approval app, not before... unless we are sure invoice pdf contains IBAN and Vendor Code that is matched already in the Vendor Master (same issue as #1)

3. understood, based on [Invoice Tracker - Currency Conversion Catalog - All Items](#)

What if we tell all vendors to mark their vendor code on the subject?
Any emails that come with out a vendor code or a mismatch get a...

not for the first time. the above issue illustrates the very first time invoice arrives for that vendor. There would be still manual work need to be done by Finance team for the first time vendor in the system. If that's fine, we can implement by hard-coded subject filter "Vendor Code - 26-001" etc. and wait for the vendor form to complete.

Thoughts -

1. Invoice creation email is sent without waiting if the vendor code is not found in the subject line (typically for the first time vendors)
2. Invoice creation email is sent awaiting the vendor form to be complete by the team (if not filled previously). A flag is set to "Yes" once all mandatory fields are filled.
3. Invoice creation email is sent without waiting if the vendor form is already complete. meaning flag is "Yes".

Note: If the vendor form is not completed due to any reason, any invoice creation email will never be sent from that vendor.

Vinayak Mahtani Wednesday 13:44

shall we do a quck call? I don't get the bottleneck

Wednesday 13:48

Vinayak Mahtani 20-05-2026 12:29

Steps on how the view can be done

The steps have many issues - beginning with

1. It assumes Finance team (individual users from Finance) CREATES the records in Invoice Tracker. If this is the case, we can implement the steps mentioned in the document.
2. Many flow steps are not directly possible. Example - there is no way to compare current and previous value of the same column in the trigger condition. We need to leverage workarounds.
3. Views CANNOT be hidden even with Targeted Audience, only the navigation is restricted but they are visible regardless (although records could not be seen since item-level permissions are in place). Moreover, if they are allowed to see records, users can still chose to remove the filters applied on the view (if they have contribute access in the site)

Wednesday 13:59

4. Done. Views have been renamed and filtered based on "HoD" = logged in person.

Also, I don't think it works for everyone who access the Sharepoint list -
example:

Ankush access Sharepoint list, he can see only the entries that are marked as "HoD" for him. Although he isn't an HoD, the filter stays on. In reality, he can see NOTHING.

If custom views are required - SharePoint developers (Web devs) can create web parts or pages with custom grid views and probably filter on logged in person by querying to their GAL job title or a lookup statis list (in our case Approval Matrix list). Out of the box, it's not possible.

Alternate solution:

Using PowerApps for everything. NO ONE should be recommended to access SharePoint List manually

1. Discussion - Vendor registration form is marked complete once all the mandatory fields are filled. Then an entry is made into invoice...

What if we tell all vendors to mark their vendor code on the subject? Any emails that come with out a vendor code or a mismatch get a reply asking them to correct it.

I'd rather an invoice does not get updated in the tracker before the vendor is registered.

2. It is possible when finance choses a vendor from the approval app, not before... unless we are sure invoice pdf contains IBAN and Vendo...

The solution with subject having the vendor code- this should solve it right?

records, users can still chose to remove the filters applied on the view (if they have contribute access in the site)

Thoughts -

This can be achieved in PowerApps in half the time by resolving key issues we face with PnP (scripts seem to be incorrect in few places), Item-level permissions (which require additional maintenance apart from Approval matrix list).

We can still go with the Permission settings if it is really required, but views is something we cannot really hide. thanks.

Vinayak Mahtani Wednesday 14:10

Again lets do a call pls- I think there is a confusion

Wednesday 14:11

sorry, I missed the above message. yes, I'm available. thanks

Vinayak Mahtani Wednesday 14:16

My understand is If an item-level permissions are properly broken, a user who switches views or removes filters still cannot see other items — SharePoint simply does not return items the user has no read permission on. The view query and the security trimming happen in different layers. The list won't show empty rows or "access denied" placeholders; the items just don't appear.

So the "view hiding" concern is solved automatically by the permission layer. You don't need to hide views.

With the Pwoer app- the user can still access the list and see everything

Wednesday 14:20

Vinayak Mahtani 20-05-2026 14:16

With the Pwoer app- the user can still access the list and see everything

no, we can control the navigation to site owners or a specific AD group etc. even if they have the link to the list

no, we can control the navigation to site owners or a specific AD group etc. even if they have the link to the list

Vinayak Mahtani Wednesday 14:27

are you joining the meeting

Wednesday 19:16

Vinayak Mahtani all the issues/changes have been implemented. I cannot start on implementing View permissions without AD groups (better than Sharepoint groups in long run and also useful in sharing the powerapps). thanks.

Vinayak Mahtani Wednesday 20:36

What do you need for that?

Wednesday 20:55

MFA reconfiguration for flow account which was requested earlier. Thanks.

Friday 16:42

I was able to test a invoice creation. it worked. thanks.

created own sandbox so you might not have access to it. let me see if I can invite/share the sandbox with you for review

Edited

invitation sent. pls check. Also, I'll create a test flow and share it with you. it accepts certain inputs and I'll share an example here and you may please enter inputs however you like and let's go from there. thanks

Vinayak Mahtani Friday 17:03

VM im in but what do i do?

Friday 17:04

I have made an entry into invoices via API, "INV-001"

kindly review if you can see it

Vinayak Mahtani Friday 17:06

VM i can't see it

Friday 17:07

try searching or filtering on ID

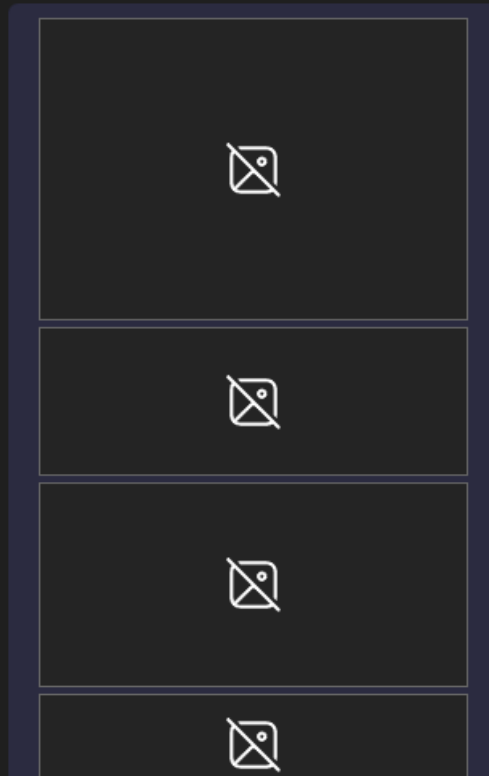

Vinayak Mahtani Friday 17:09

VM This is a sales invoice- we need to enter in bills

Friday 17:14

Bills? Ok, the document shared was for invoices so created an api for that. Kindly provide a sample entry details or I can record a session if we can have a call

Friday 17:22

this is the info in the scope document. kindly share which service we have to hit and the field mapping (mention mandatory), thanks

Vinayak Mahtani Friday 17:27

VM Invoices are in Quicbooks calledbills

lets do a quck call

Vinayak Mahtani Friday 17:39

VM im onthe call

Yesterday 11:45

HoD views set up is done. Thanks

Vinayak Mahtani Yesterday 12:04

Thanks

Vinayak Mahtani Yesterday 16:24

Hemant Ankush can you both pls meet and review the vendor registration process and see if the vendors registered so far have been done correctly with attachment also saved?
Can we aim to close this today pls

7 replies · Last reply Yesterday 22:00

Ankush Yesterday 16:54 Edited

Hemant- as discussed, need to plug in the COA and Chart of Accounts and Finance ideally should be approving after verifying the records basis the documents

Vendor code get triggered automatically and for Rayat Al Alam - vendor code is 26-005

Vinayak Mahtani Yesterday 16:54

no-reply At the moment there is no way to see if a vendor is approved or not- this should either be done by finance or me- only after that can invoices from this vendor be registered/
Once approved an email should go to them reminding them of their vendor code

6 replies · Last reply Yesterday 18:45

I think we discussed an approval button or something

I think we discussed an approval button or ...

Vinayak Mahtani Yesterday 16:55

I think we discussed an approval button or something

Yesterday 17:06

yes, a "flag" which would be completed when all the mandatory fields are filled by Finance. Hope the mandatory fields are set by you (it was pending from your end).

Vinayak Mahtani Yesterday 18:14

Nearly done- How and where do we add more departments?

Yesterday 18:20

You may please add in the approval matrix, I'll grab from there and update

Yesterday 18:26 Edited

I'll provide screenshot for future reference once updated

Vinayak Mahtani Yesterday 21:30

but how do we add if want in the future

its threw in the Matrix but its not there in the vendor registration form
